ABOUT US

● Since **1997**, working for your home comfort and well being

For over 25 years, Tecnostuk has been synonymous with innovation and reliability in the residential and commercial construction sector.

Founded in 1997, the company carries forward a tradition of **quality, research, and environmental awareness.**

It develops and produces high-performance materials with the goal of offering **durable and sustainable solutions.**

Strict control over production processes, careful selection of raw materials, and continuous team training ensure high standards and reliable products.

OUR TEAM

We are people with a healthy ambition to make an impact on the market while staying true to our principles: **quality, hard work, and a genuine desire to innovate** – always meeting our customers' needs.

THE VALUES THAT GUIDE US

Focus on product
quality

Attention to
aesthetics and
functional packaging

Thorough research
of raw materials

Maximum care
for efficient
sales services

Strong desire
for innovation

Deep sensitivity
toward environmental
impact

OUR MISSION

Technical solutions for home well-being

We aim to improve **people's quality of life** by enhancing indoor air **quality and comfort** – while respecting both the environment and those who live in it.

Why is clean air important?

Every indoor space is defined by its surfaces, and their condition directly affects quality of life.

A healthy environment improves comfort, health, and energy efficiency.

Through **highly specialized technical solutions**, we make indoor spaces healthier, safer, more comfortable, and more environmentally friendly.

OUR KNOW-HOW

Indoor Well-Being System

From this vision comes the **Indoor Well-Being System** – an integrated set of certified solutions designed to prevent and resolve issues linked to mold, humidity, and cold surfaces.

The system includes three cycles: **mold sanitization and preventive protection, thermal insulation**, and a complementary range of **light construction** materials.

Not only solutions: our products respect people and the environment. They contain no chlorine and are certified Class A+, meaning zero harmful emissions.

INDOOR WELL-BEING SYSTEM

SANITIZATION

Clean air starts from the walls

Mold and humidity, which appear when large areas of walls or ceilings are deeply affected – often in environments with high moisture levels, poor ventilation, or thermal insulation issues – can significantly compromise the quality of indoor spaces.

Tecnostuk solutions are designed to **act in depth, restore surfaces, and improve the healthiness of environments** in a concrete and long-lasting way.

SANITIZATION

Our mold-sanitizing line represents the integrated approach that has always distinguished us: technical, highly effective products designed to ensure safe and lasting results.

MuffaClean Active, an advanced odorless and chlorine-free cleaner, sanitizes and removes even invisible mold.

Muffa K.O., a special primer with anti-mold and thermal-insulating action, neutralizes and prevents regrowth thanks to its innovative, safe, chlorine-free formula.

THERMAL INSULATION

Comfort you can feel

Cold walls, condensation, humidity or thermal dispersion are all signs that negatively affect daily comfort and the overall energy efficiency of indoor spaces, making it necessary to intervene with targeted and reliable insulation solutions.

Tecnostuk has developed a complete system designed to **improve the thermal performance of walls**, ensuring comfort throughout every season of the year.

THERMAL INSULATION

Kalorfix®, a thermal acrylic primer, prepares and protects the substrate, helping keep surfaces drier and reducing moisture and mold formation.

Freddo Stop®, a high-performance thermal coating, reduces heat dispersion and helps stabilize room temperature, improving overall energy efficiency.

Termika-Mix®, a thermal insulating additive for paints, increases the surface temperature of walls and reduces thermal bridges, promoting a more uniform and comfortable indoor climate.

PREVENTION

Long-lasting protection

Better safe than sorry!

When it comes to mold and humidity, prevention is the most effective choice: it protects interiors over the long term, ensuring lasting comfort.

The Tecnostuk prevention cycle creates a **protective barrier, invisible yet durable**, designed to hinder the formation of mold and spores before they even appear. It is the ideal solution for healthier environments, protected walls, and comfort that lasts over time.

PREVENTION

MuroSano Fix consolidates and prepares the substrate, creating a stable and resistant barrier.

Muffa Protect-Mix, added directly to wall paint, completes the treatment by enhancing mold resistance, maintaining wall breathability, and preserving the surface appearance over time.

LIGHT CONSTRUCTION

LIGHTNESS, VERSATILITY AND PERFORMANCE FOR QUALITY FINISHES

The Light Construction Line is an innovative and practical solution designed to meet the needs of professionals and applicators in the building sector.

Developed to combine **lightness, versatility and high performance**, this range allows for quicker, more precise and efficient work.

Thanks to its ease of use and reduced material waste, the products in this line ensure **ideal preparation of interior surfaces**, optimising work time and guaranteeing high-quality results.

The advanced formulations offer **long-lasting durability, excellent coverage and effective protection** against humidity, mold and deterioration.

WHAT WE OFFER

A complete system of professional materials

- Fillers for smoothing and repairing
- Acrylic primers
- Eco-friendly adhesives
- Pigmented primers
- High-performance skim coats

Benefits

- **Lightweight:** easy-to-apply products, optimised for transport
- **High yield:** superior coverage to reduce waste and costs
- **Durability:** long-lasting materials that protect surfaces
- **Versatility:** ideal for interior use on a wide range of substrates

Application fields

- Preparation of surfaces for decoration and painting
- Renovation works on interior spaces
- Protection against mold, humidity, cracks and deterioration

OUR BEST SELLERS

GRIP 283

Acrylic universal glue for coverings.

EXTRA GRIP: sticks everything together, safely and quickly.

- Strong initial grab with suction-cup effect
- Low-VOC acrylic formula, free from harmful solvents
- Ideal for cork, insulation panels, skirting boards, ceramic wall tiles, wainscoting, PVC and shelves
- Stable, professional hold that reduces time and effort

Versatile, eco-friendly, reliable.

OUR BEST SELLERS

PYGMENT PLUS 007

Water-based consolidating and pigmented primer.

EXTRA COVERAGE: the perfect base for uniform finishes.

- Levels surfaces and improves paint coverage
- Excellent adhesion, also ideal on plasterboard
- Protects against mold and deterioration

Uniform coverage, optimal preparation, long-lasting performance.

WHY CHOOSE US

Comprehensive range

Integrated solutions for indoor well-being and light construction. A unique assortment that covers every need related to surface preparation and treatment.

High-value specialist products

Technical formulations designed to solve actual problems, offering professional performance that is easy to apply and safe for both people and the environment.

Technical and commercial support

Supply of in-store materials – from shop fittings to customized window displays: stands, videos, posters and fully personalized panels.

Proven reliability

Over 25 years of experience, consistent quality, controlled production, and a brand recognized for expertise and effective, concrete solutions.

CUSTOMER EXPERIENCE: ANTONIO'S STORY

A satisfied customer: more than a result, a relationship

Sometimes a product becomes something more. A memory. A certainty. For Antonio, Libera Paint was exactly that.

"Years ago, after treating a mold problem, I used Libera Paint by Tecnostuk. Since then, no more mold, no more issues. It worked so well that I never forgot it.

Recently, I tried to find it everywhere in my area, but without success. Everyone suggested other products, but I only wanted that one. I was discouraged.

Eventually, I decided to call the company directly. And something happened that I did not expect: they listened to me, understood me... and sent it to me free of charge. A simple gesture, but one that truly moved me.

Thank you, Tecnostuk, for your products and for the kindness with which you treat your customers!"

For us, every customer has a face, a name, a story.

We are a small company, but we pursue something significant and priceless: our relationships!
